

FIMI-ISAC Incident Alert: 0096. TLP: CLEAR			Date
Title	CZ	Deceptive Meta ads via “Šokující Česká 24” drive users to fake investment platform	30/09/2025

Summary:

- A Facebook page “Šokující Česká 24” ran numerous Meta ads that used credible-looking visible domains but redirected users to scam sites promoting a fraudulent investment platform (“CisporaSeek”).
- Clickbait “political scandal” headlines referencing Czech public figures (e.g., Vít Rakušan, President Petr Pavel) drove traffic into a fingerprinting-based redirect chain that served scam landing pages.
- 316 Meta ads activated (221 removed by Meta); estimated EU reach 3,399,913 users.
- The operation relied on targeted advertisements and clickbait headlines to lure users toward inauthentic news sites. These ads used deceptive labelling and geographic segmentation to mislead audiences and direct Czech users into the scam funnel.
- Reported via RRS to Meta for takedown; suspend associated ad accounts; blocklist destination domains; verify ad payer identities.

Incident:

The Facebook page was originally created as “Strigl Creations” on 31/10/2024 and later renamed to “Šokující Česká 24” on 23/07/2025. Since then, the page has been used to run 316 Meta ads across Facebook and Instagram, with a significant proportion already flagged and removed by Meta for violating advertising standards.

The ads employed deceptive tactics, showing credible visible domains such as seznamzpravy.cz but redirecting users to newly registered scam domains like melisesorej[.]info or meetod[.]info. These sites fingerprint visitors and, based on location, selectively redirect Czech or neighbouring users to fraudulent articles promoting the fake investment platform CisporaSeek, while others are routed to neutral storefronts. Politicians’ images have been used alongside fabricated statements - for example, claims attributed to Czech President Petr Pavel suggesting that hundreds of vacancies remained on the platform and urging people to register in order to secure a substantial monthly payout.

The messaging consistently targeted Czech politicians and public figures, presenting fabricated scandals to entice users to click through. In total, the ads reached nearly 3.4 million users across the EU, while infrastructure indicators such as gibberish payer strings, Russian-language HTML

comments, and networks of similar domains targeting other countries point to a broader, organised scam operation. Critical details remain unknown, including the identities of administrators, the full domain ecosystem, financial losses, and payment processors involved.

Systemic violation assessment:

The campaign exposes users to financial fraud by luring them into registering on a fake investment platform using profiles of politicians. Vulnerable groups, such as elderly or less media-literate users, are at heightened risk of deception.

The manipulation lies in tactics rather than content, using spoofed domains, cloaked ads, and selective redirection to mislead audiences. This qualifies as coordinated inauthentic behaviour designed to exploit users for financial gain.

The activity likely violates EU and Czech consumer protection and fraud laws by impersonating the media and promoting fraudulent financial schemes. The tactics mirror offline criminal fraud, such as impersonating trusted institutions to deceive citizens. Under the DSA, platforms could also face regulatory scrutiny for failing to mitigate such systemic risks.

Narrative:

Meta narrative: Democratic institutions and trusted media cannot be relied upon.

Sub-narratives: Politicians are corrupt and involved in scandals.

Impact:

Reach: 316 ads (221 removed); estimated EU reach 3,399,913.

Outcome: N/A

Key Objectives and Behaviours ([DISARM Red Framework](#)):

[T0137.002](#) Scam - the false ads are aimed at scamming Facebook users.

[T0018: Purchase Targeted Advertisements](#) - 316 Meta ads leading to scam domains.

[T0016: Create Clickbait](#) - sensational headlines referencing public figures to drive users.

[T0098.001: Create Inauthentic News Sites](#) - scam domains masquerading as news sources (e.g., melisesorej[.]info, meetod[.]info).

Recommendations and Actions Taken

Actions Taken: Reported through Rapid Response System (RRS) to Meta for takedown and ad-account review

Recommendations:

- Enforce stricter verification for advertiser/payer identities and disallow unverifiable "Paid for by" entries
- Blocklist identified destination and relay domains
- Detect and block ad creatives where visible-domain and landing-domain mismatch occurs at review/runtime
